

# Clarius®

## Clarius CleanLITE coating

The GJD Clarius range of LED illuminators have a unique coating known as CleanLITE. This is a hydrophobic coating that repels water and remains clean and virtually dirt-free.

When dirt and dust come into contact with the CleanLITE coated front cover, water quickly flushes it away. The water is repelled by the coating, the dirt is attracted to the water which then simply rolls away.

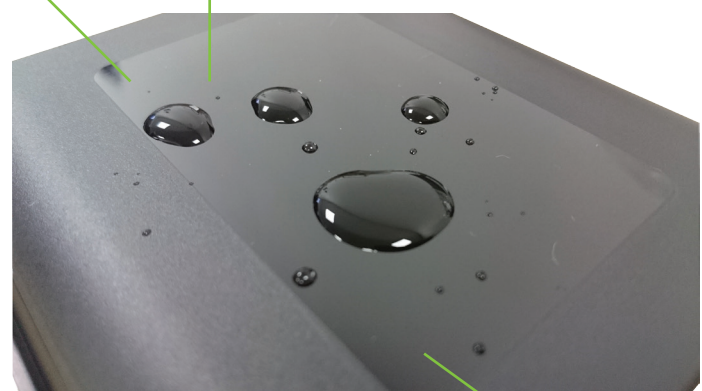

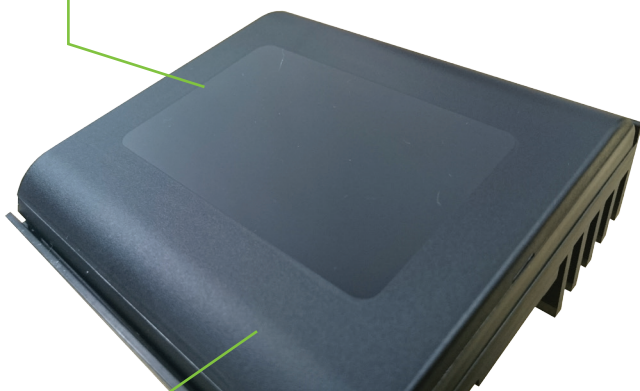

Even under extreme conditions like high pressure spray, the CleanLITE coating maintains its hydrophobic characteristics.

100% optically clear

Durable permanent layer of protection

UV resistant, will not blister, peel or discolour

Easier to clean, allowing insects and bird droppings to be easily washed away

Improved scratch and impact resistance
