

Prestigious property development features GJD's D-TECT 3 wired detector

GJD's D-TECT 3 wired detector has been specified and employed as part of a major security installation on a prestigious property development by Premier Alarms Ltd based in Sevenoaks, Kent. Premier Alarms install high quality reliable equipment to the highest standards at the most competitive prices.

The D-TECT 3 is an advanced external dual-technology detector. It was selected for the residential project owing to its key features including high immunity to nuisance alarms, unrivalled catch performance and adjustable detection range.

The innovative D-TECT 3 is a BS8418 compliant, quad element PIR and microwave external movement detector, which can be used to control cameras, connect to alarm panels and communicate with GJD's lighting control systems.

Commenting on the decision to specify the D-TECT 3 equipment, Neil Ricketts of Premier Alarms said: "We have had previous good experiences with GJD products on other lighting installations. They are robust, very well made, reliable, and function exactly as intended. GJD is also a very professional company, with a proven track-record and excellent reputation for service, this made the choice to deploy their sensors very easy and one that we have never regretted".

Mark Tibbenham, Managing Director of GJD reflecting on the project with Premier Alarms commented: "Our D-TECT 3 wired detector has built up its reputation over many years to the point where it has effectively become the industry standard. Nevertheless, I'm pleased to learn of ongoing good experiences with our products and delighted that Premier Alarms should take the trouble to report so positively on their experiences with a major residential security installation where our products were specified and fitted".
