

CASE STUDY

Detectors match car dealership style

Hewes Security partnered with distributor ADI Gardiner to provide a car dealership with security that matches the stylish design of the cars and building.

Working with ADI Gardiner's Chelmsford branch, Hewes installed stylish D-TECT 2 Infra-Red detector units from GJD at the new Audi dealership at Rayleigh, near Southend, Essex.

The sixteen Infra-Red detector units were specified for the exterior of the dealership because Audi wanted security with a modern design that matched the style of the buildings on the two-acre site.

The twin PIR Passive Infra-Red detector unit – a finalist in the 2006 IFSEC Awards, has a programmable range of 8-30m and integral masking curtains that allow its field of view to be adjusted from 10-70 degrees.

Richard Hewes of Hewes Security said: “the detectors met all of the needs of the site including superior detection and aesthetics”.

Wendy Ford, North London regional business manager at ADI Gardiner said: “We were delighted that we could help Southend Audi solve a unique showroom need.”
